PROCESS SOLUTION SPECIALISTS

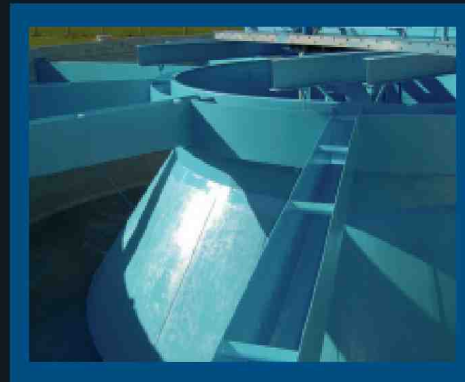

PROTECTIVE COATINGS

**FLOOR - METAL PROCESS - TANKS
BIOFILTER REPAIR**

Chemical attack on concrete. Repaired with Milamar 2620 chemical resistant liner and topcoated with Milamar 3300 CR chemical resistant veilcoat. Returned substrate better than new construction with chemical resistant coatings.

CLARIFIER APPLICATION

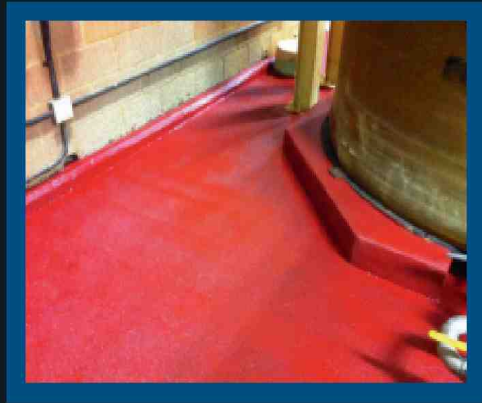

Blasted to near white metal and installed Chesterton ARC-S-1 PW potable water lining to all metal areas. Not only protected from erosion and corrosion the clarifier is easy to clean as the lime build-up is minimal. Less downtime saves money.

NOW SERVING:

- OHIO - INDIANA - KENTUCKY - PENNSYLVANIA - WEST VIRGINIA - VIRGINIA - MARYLAND -

SECONDARY CONTAINMENT IN CHEMICAL PLANT

By using our vinyl ester linings we can repair spalled and eroded concrete and return the concrete to better than new construction. This allows the coating to handle the acids and caustics and not permeate the concrete and leach chemicals into the ground water. Saves money and better environmental results when using our secondary containment coatings.

EKATO BLADE UPGRADE

By utilizing our Chesterton ARC-MX-1 reinforced ceramic composites we can rebuild your Ekato mixer blades to exact tolerances which saves downtime on changing out new blades. The MX-1 is resistant to heavy abrasion and chemical attack and saves money on replacement of new mixer blades.
